Additional Benchmark and Base Flood Elevation Comments

Benchmark Description:

HWM 26 1982 Army Corps of Engineers high water mark study of San Anselmo Creek - yellow paint mark on southerly of two 1-1/2" iron pipes 1.5 ft above ground at the approximate top of bank of San Anselmo creek 35'± east of the southerly end of the bridge on Sir Francis Drake Blvd. 0.1 miles south of Bolinas Ave.

Base Flood Elevation Determination:

A Base Flood Elevation of 35.7 feet (NGVD 1929) was determined for this site based on the 1982 Army Corps of Engineers high water mark study of San Anselmo Creek "HWM 2846" on Locust Ave. 100 ft south of Shady Lane on the west side of San Anselmo Creek opposite this site.

FEMA is in the process of restudying San Anselmo Creek with a final report expected in 2012 (not available as of the date of this survey). The current FEMA FIRM maps do not indicate a B.F.E. in this area of San Anselmo Creek. The town of Ross uses the referenced Army Corps of Engineers study for determining the B.F.E. along this portion of San Anselmo Creek.
